

# Connecting grids worldwide

Kors Bos

# Compare with networks

- The internet is a coupled set of separate networks
- And that works!
- Should grids impose additional TYPES of problems?
  - If so: find those first
  - If not: is it just a matter of scaling?
- Look at how the providers arena solved it

# Communicate!

- Are there enough policy bodies concerned with linking grids worldwide?
- Are they accepted by the communities, are they “powerful” enough?
- Are there issues where by endorsement e-IRG could contribute to Europe being “grid-aware” to the rest of the world

# Towards the world wide grid

Inventory of steps to be set
