

Building e-Infrastructure services & meeting diverse demands

David Wallom
UK NGS & University of Oxford

Overview

- Mission, goals and where we sit in national/international infrastructure
- Services and resource providers from within the UK research community
- Supporting user communities across the spectrum

NGS Mission and Goal

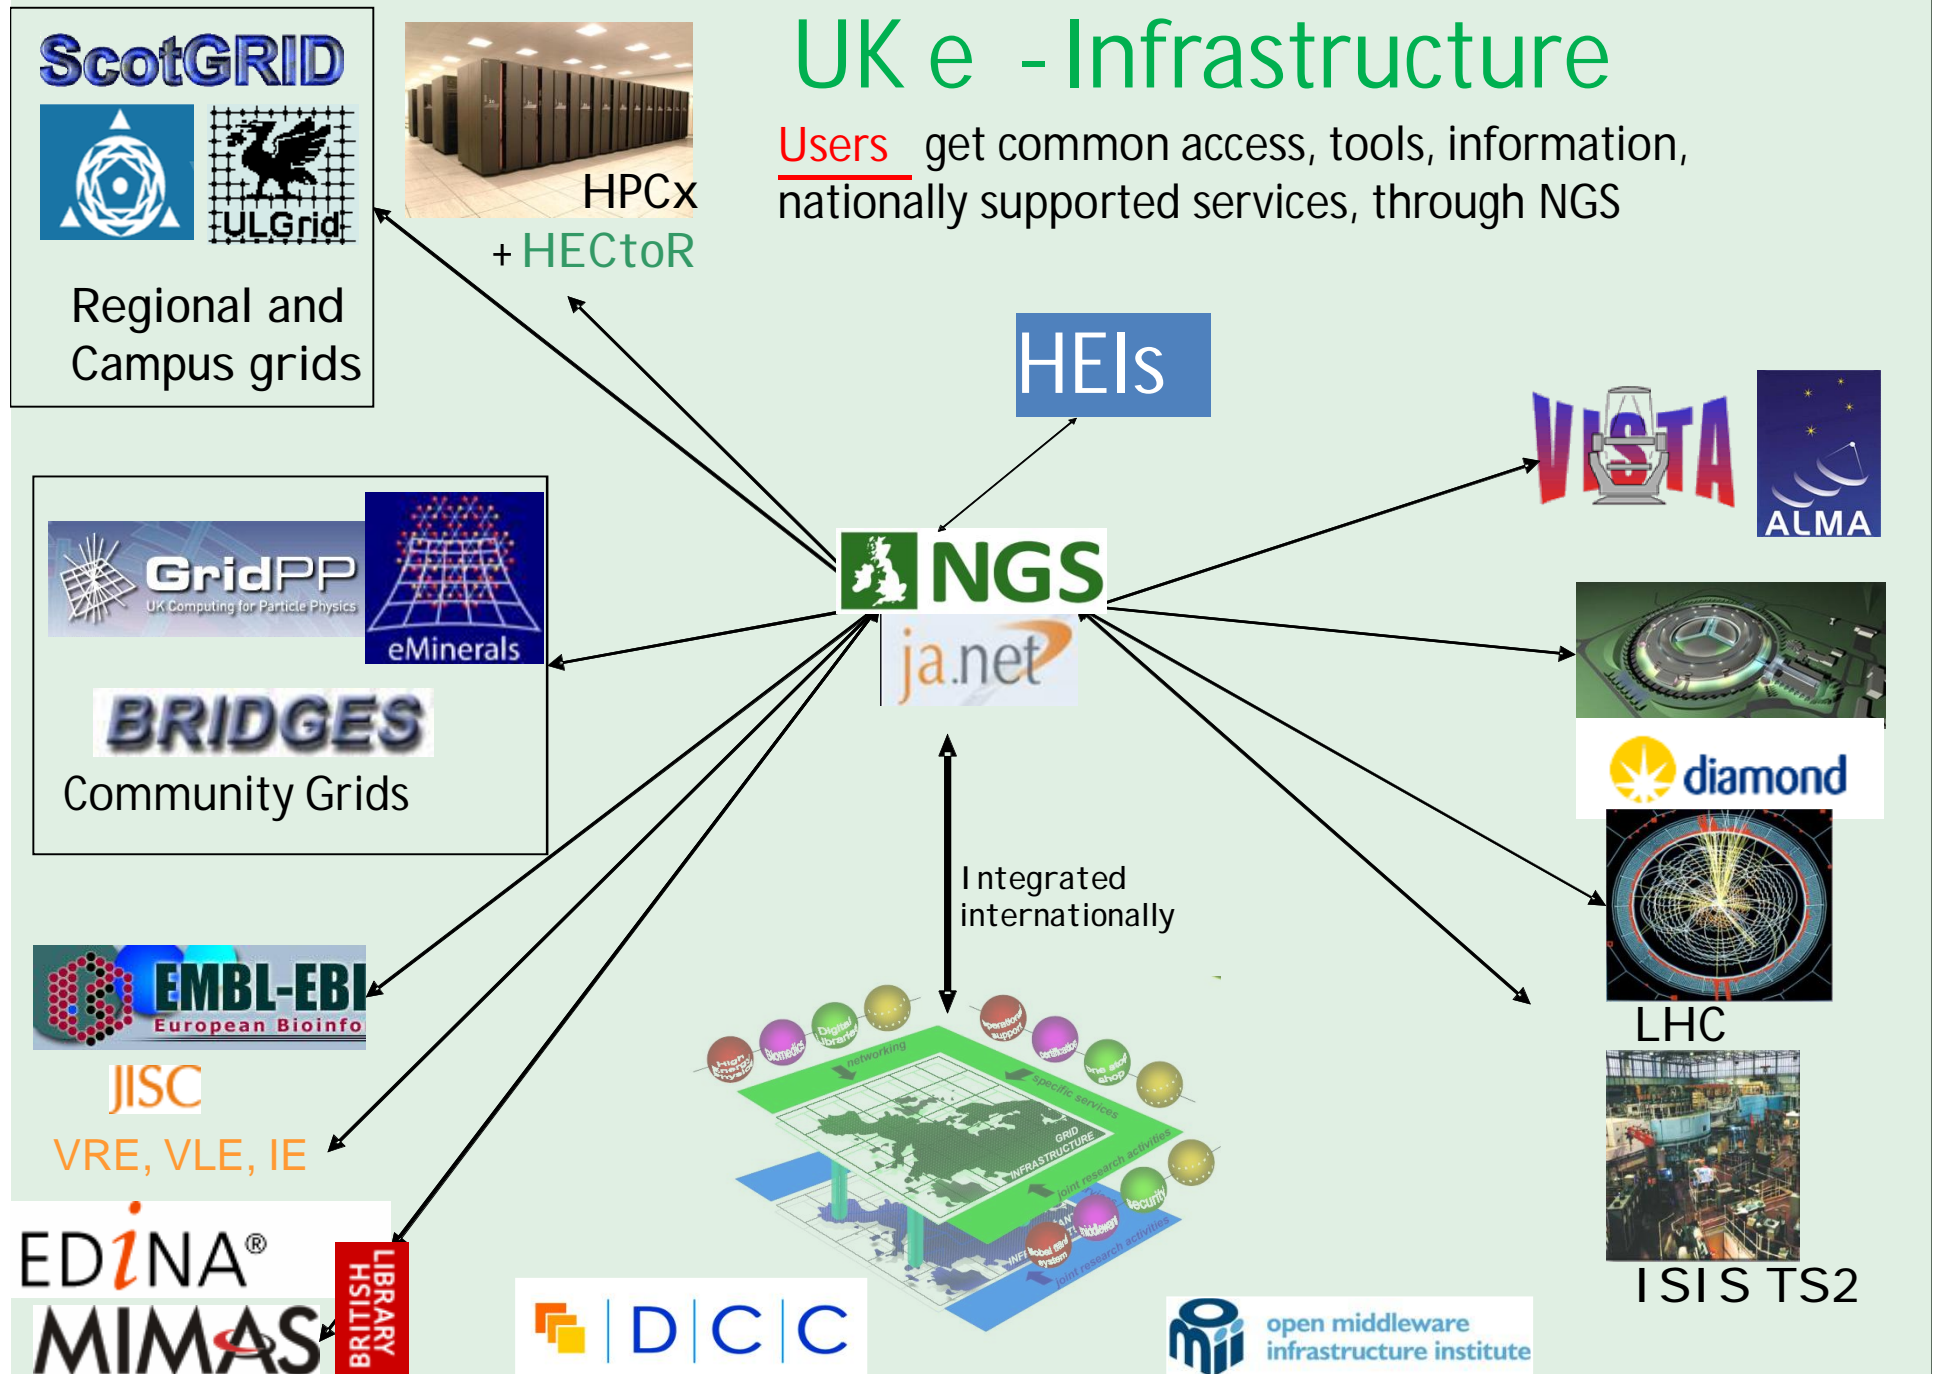

To enable coherent electronic access for all UK researchers to all computational and data based resources and facilities required to carry out their research, independent of resource or researcher location.

Goal:

- To enable a production quality e-infrastructure
- To deliver core services and support
- Integrate with international infrastructures following user community demand

UK e - Infrastructure

Users get common access, tools, information, nationally supported services, through NGS

Organisational Membership

- Personnel
 - Appointment of an institutional Campus Champion
 - Liaison between university/research organisation and NGS
 - Nomination of a senior institutional staff member for the NGS Collaboration Board
- Resource Exchanging
 - Regularly tested installation of NGS defined interfaces as described in the NGS Site Level Services Document
 - Partner
 - Supporting access by a significant body of NGS users
 - Publish a service level description (SLD) detailing the services offered
 - Affiliate
 - Maintains control over permitted users

What does the NGS offer users?

- Compute services
 - Access to more and different resources
 - Different ways of running jobs e.g. multi site MPI
 - Supporting ALL current available middlewares
- Data services
 - Access to data storage
 - Support and advice
 - New ways of accessing data (Including remote relational DB, Metadata Catalogues etc)
- Access Services
 - User facing services providing exemplar instances for methods to use available resources, developing new and innovative methodologies, e.g. Drop and Compute, Uniform Execution Environment
- Central Support services
 - Individual services needed to support user access, control and management

Specialist services

Westminster

- Operates and supports P-GRADE portal and GEMLCA legacy application support services

Belfast e-Science Centre

- Web Service Hosting Container Service
 - Web service containers into which projects or VOs can deploy their own Web or Grid services, using automatic deployment technology

Oxford e-Research Centre

- OMII-UK GridSAM
 - OGF HPC-Basic Profile compliant Job submission
 - Promoting interoperability with international grids
- Eucalyptus Cloud system
 - Exposing AWS compatible interfaces and functionality to NGS users

Edinburgh

- Eucalyptus Cloud system

STFC Rutherford Appleton Laboratory

- Visualisation using specialised cluster from within the STFC e-Science Viz group

>1000 cpu, ~500 db
~200 MyProxy users

> 75 applications

2nd largest e-Science CA

- 22,121 certificates issued
- 4,911 active currently

25 member institutes
33 heterogeneous resources
15,000 processing cores

In the last 12 months

- 4,629,127 CPU hrs used
- 888,862 jobs ran

Diverse User Community

Security

Predicting Crime

Nick Malleston, Leeds University

- burglary rates
- agent-based predictive models
- vary environmental factors, predicts

burglar's behaviour

adapted Java program to run across Grid

NGS speeds things up

- 2.5 years of results in under a week

Connecting Infrastructure

Connecting Research

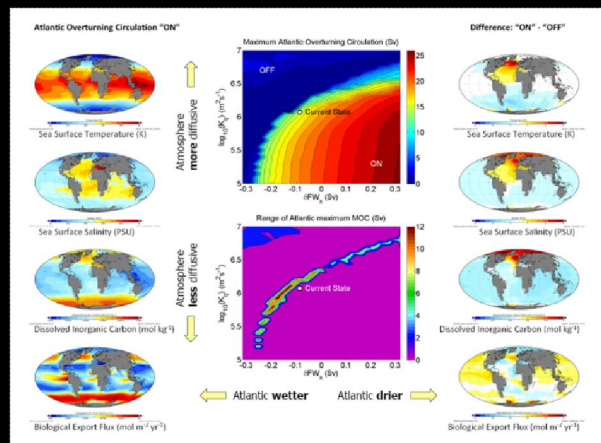

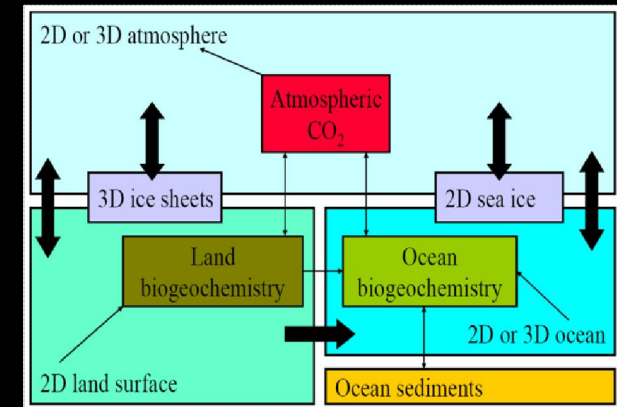

NGS

Environment

Oceans and Climate

Andrew Price, GENIE project, Southampton

- thermohaline circulation in oceans
- integrates component earth models
- future climate prediction

- 5 yrs computations in 3 months
- integrates NGS, National HPC and institutional computation
- NGS hosts database
- users share simulations, metadata

NGS

Health

Cerebral blood flow

GENIUS project

- processes 2D MRI images, recreates 3D vasculature map
- visualise and steer the model in real time
- advanced resource reservation
- utilize international federated grid of supercomputers

NGS

Astrophysics

Distributed Astronomy Databases on the NGS

- *Helen Xiang and Professor Robert Nicol at the University of Portsmouth*
- *Linking multiple data sources, private and public*
- *Utilising open, standard interfaces*
- *Simple retrieval of the data using one command.*

Institutional User communities

- Malaria Mapping (HTC, large data)
- Phylogenetic Analysis of DNA (large data)
- Analysis of Clinical ECG data (real-time processing)
- Biochemistry (linked HPC & HTC)
- Astronomy (national data access)
- Chemistry (Specialist software)
- Satellite image analysis (HPC & special software)
- Heart modelling (National, regional and institutional HPC access)
- Supporting direct campus to national resources integration.

oerc

Conclusions

- NGS is here to support university research computing services support their research communities by making connection of ITS enabled resources easier
- Connectivity using standard interfaces to include UK national data sources including EDINA, MIMAS, NADS as well as experimental facilities such DIAMOND, e-Merlin, ISIS and JET
- The NGS supports UK participation in all ESFRI projects for connectivity of e-infrastructure
- We must remember the importance of all users

Thank you & questions
