# Goals and Strategy

- The key goal is to **unify a wide range of fields of knowledge and science around the central theme of information technologies**, thus not only achieving developments in informatics and computational mathematics as such, but supporting the development of all fields involved
  - **computing.[★]; ★ = All Fields**
- The overall aim is to create a mutually interlinked, closely cooperating workplace focusing on the following 4 key areas of activity:
  - **IT4People** (Information Technology for People) focusing on improving quality of life in society via the development and provision of new services based on modern information technologies.
  - **SC4Simulations** (Supercomputing for Simulations) focusing on supercomputing and research into the development of new methods and algorithms of computational mathematics with subsequent application in multidisciplinary simulations (stress and deformation analysis of complex systems, shape optimization, fluid flow problems, material design, biomechanical simulations, drug design, etc.).
  - **EC4Innovations** (Embedded Computing for Innovations) focusing on the research and development of sophisticated embedded systems applied in mechatronics and innovative medicine.
  - **Theory4IT** (Theory for Information Technology) focusing on basic research into the development of new and non-traditional computing methods, based on disciplines such as softcomputing, formal methods, knowledge-oriented and biologically motivated algorithms.

Ultralights

# Theory4IT

- The goal of the project in activities related to the development of theory (IT4Theory) is to carry out research focusing on mathematical theories of modern computation methods in the following five key areas:
  - **Softcomputing4IT** (Softcomputing for Information Technology):
    - research of mathematical principles and methods of processing knowledge burdened with uncertainties and their use in the development of methods and technologies applicable in decision-making, management, complex systems design etc.
    - research of strategy and cooperation in multiagent systems.
  - **Knowledge4IT** (Knowledge Systems for Information Technology):
    - research and development of modern methods used in software engineering and data management,
    - research of algorithms inspired by biological models (evolutional and genetic algorithms, ant colony theory, neural networks, etc.),
    - research of knowledge mining and the development of special data structures for storage of extensive collections of weakly structured data.

# Costs Estimation

- **Budget**

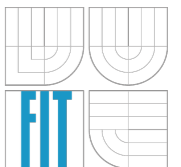

– 1. Construction-related Investments:	600 mil. Kč
– 2. Equipment costs:	1 000 mil. Kč
– 3. Start-ups:	400 mil. Kč
– -----	
– TOTAL:	2 000 mil. Kč

- **Main Investments:**

– New premises for supercomputer center	400 mil. Kč
– Supercomputer	700 mil. Kč

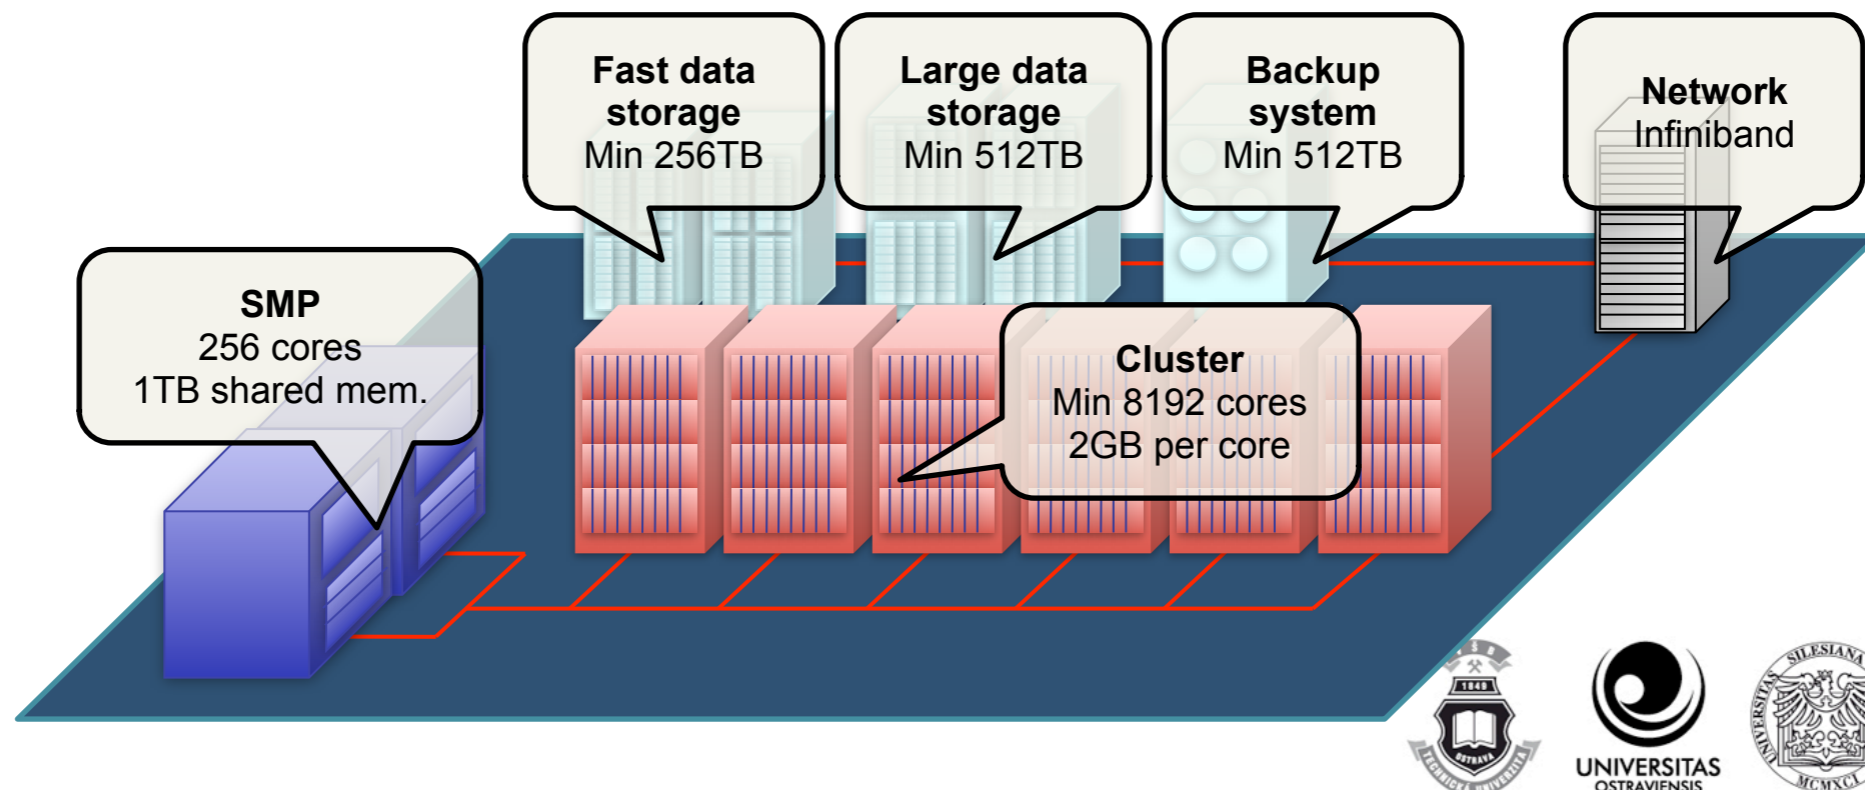

- **Operations costs (2016 and on): 300 mil. Kč/year**

- 25 - 35% of these costs will be covered from application sphere

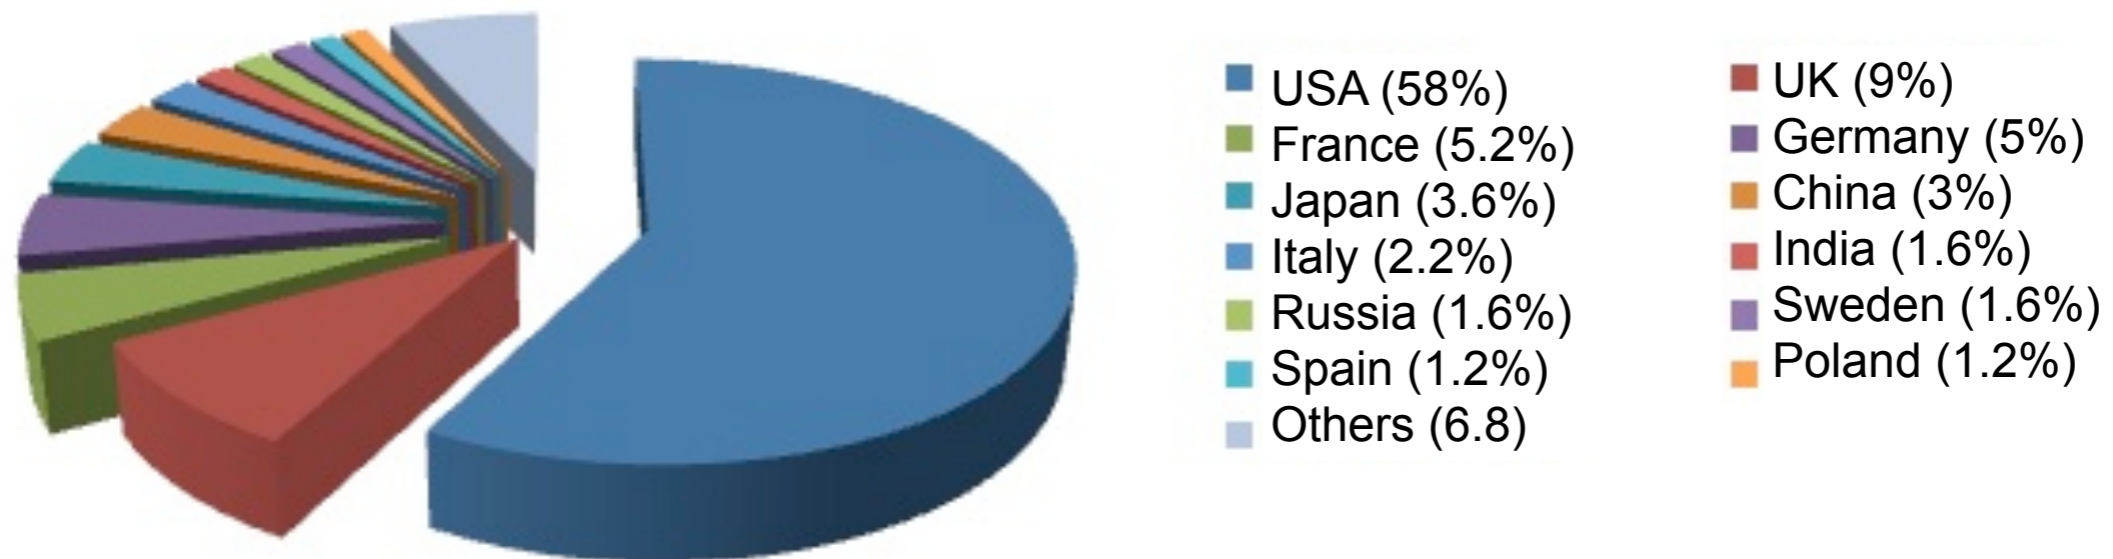

# Supercomputer Center

- Development Software
  - Netlib (Lapack, Lapack, Atlas, ...)
  - MPI, PETSc.
  - Matlab + Simulink
  - OOSol, MatSol (Our own libraries)
- Application Software
  - CAD (Catia, NX, ProE, ANSA, OrCAD ...)
  - FEA (ANSYS, ABAQUS, MsC, Comsol, Fluent, CFX ...)
  - Others: ESRI, FEFLOW, MODFLOW, Witness, SPSS
- Hardware Configuration

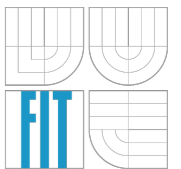

# Why do we (Czech Republic) need supercomputer?!

- **Research in new technologies and supercomputing simulations cannot be separated!** Right now Czech Republic has no supercomputer in TOP500:

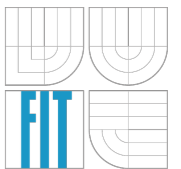

- Simulations in disaster management require to compute large number of numerical experiments in a very limited time! The only option is execute such task in parallel and to employ sophisticated algorithms for their coordination.

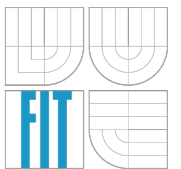

# Main Characteristics of the Center IT4I

- **Personnel: 200 employees (= 130 FTE)**
  - 20 management positions, jobs in services, and systems administration.
  - 80 research positions
    - Key senior researchers connecting the computer science/technical side and the application/scientific side)
  - 100 doctoral candidates and postdocs
- **Open access** for external partners from academia and industry
  - Project proposal shaped according their needs – survey planned
  - Promised cooperation: Integrated Safety Center, Visteon-Autopal, Vodafone, Saab Group, Vitkovice, Faculty Hospital in Ostrava, CESNET, IVAX, ITCluster, ...
- Increasing demand for and skills in (super)computing by **education and training** in scientific computing (e.g. summer schools)
- IT4I as a **national HPC center** cooperating with European SC centers (relations to PRACE project partners)
