

Michael Gronager, PhD

NDGF Director

Open e-IRG Workshop
Uppsala, October 14-15th, 2009

Activity Outline

Vision: A Nordic resource trading system

- Enabling
 - Initial problems outline
 - Locating enabling tools

- Next steps
 - ■New tools
 - ■New Policies

The Grid

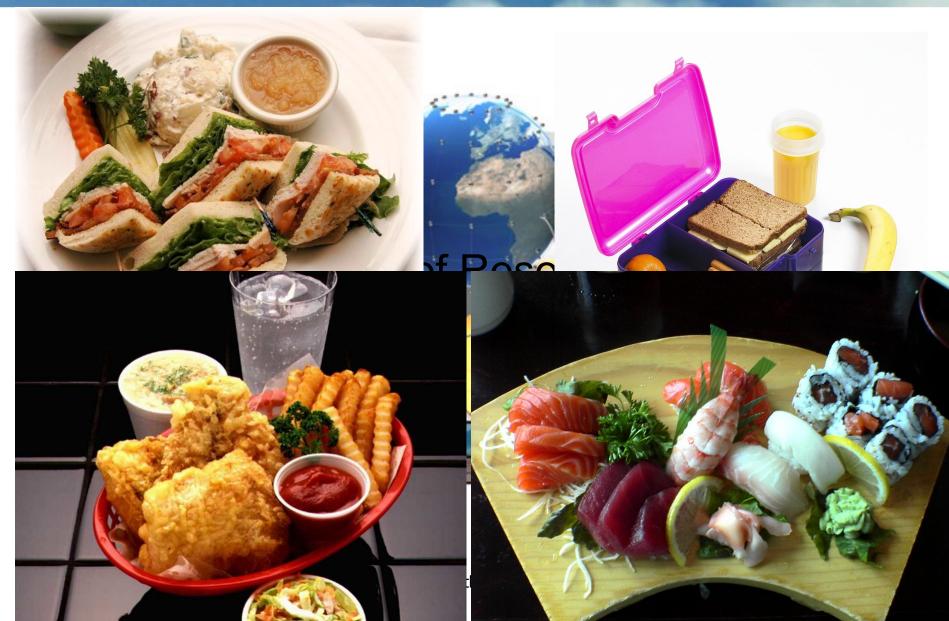

The Grid

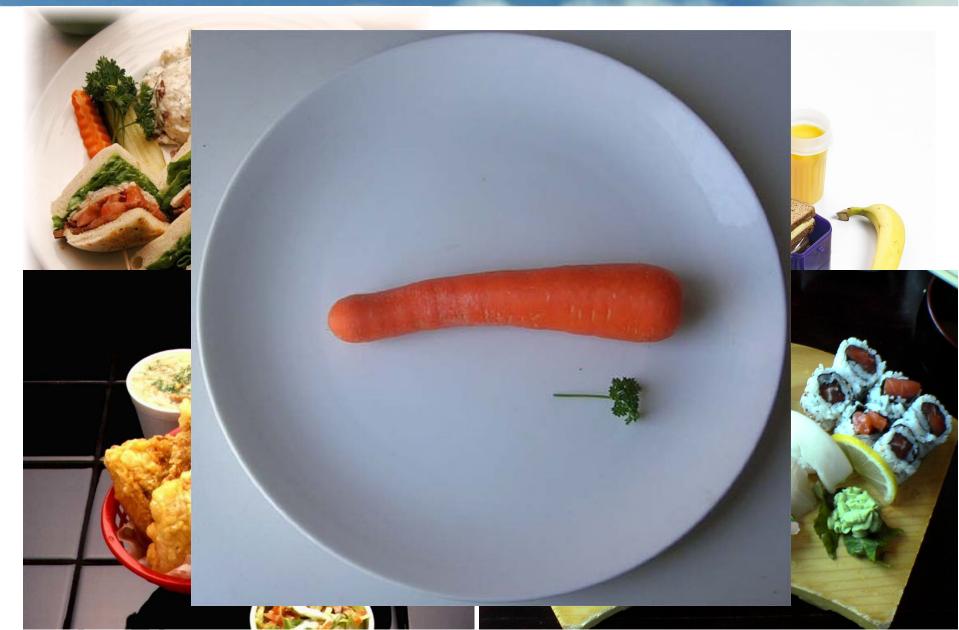

Free Lunch!

This is Free Lunch...

Problem I

Free lunch is bad lunch

Use of Grid services need to come with a "price"

But first we need to know who used what ...

Digital Identities and Rights

are complicated to request...

| Read note 9. | Declaration this must be filed in by the person named in section 2. If worder 16, their power or guardian must 8 this in inclass. S E / 0 4 / 0 4 Cauthon: It is a criminal officers on scale in this solutions of large paragraphy. If you have made a false similarment on this form, you could he prosecuted and could go to prefere. Our work includes cheeding that the counterreposition. |
|--|--|
| IMPORTANT You most date section 8. | in a contine 16 is genules. Colories that I am (6 years or early in within here weeks) and that: 1. All that this live passport to 8 is passport office. If it service like any possession. 2. Education any possession. |
| I M P O R T A N I If a parent or guardian is signify section 0, parent in repulsibility and should give their reliabelity to the telde. If the parents telde, if the parents te | 3 of all bounds, are a legisla vision of this application of a state of the state o |
| mor down. | Residentially to child |
| Read note 10. IMPORTANT The person ection as the contraviguatory must sign section 10. Courset if entitle or risk paragraph and paragraph and be wiffing to provide significant or the paragraph and paragraph sample or the page paragraph and the page paragraph and the page paragraph and the page paragraph and page paragraph and page page page page page page page page | Please make sum this section is dated. Countersignature if a contrarignature is readed, they must ill in this section after the rest of the form has been filed in. Caurition: If it is a criminal affence to make a false abstement to help comessor get a passport. Obeck this form properly before your list in this section. If you have made any false statements on this form, you could be grosscated and could go to prison. Our work includes checking that your doublet make the manner of the including the statements on the first make the manner of the property of the prop |
| Posse unclose two plants that repetition that repetitions that meet the URT's phete quidance. On the book of only one photo, the compareignative and the compareignative processes of the section of the person named in section 2. The rest this rate of the person named in section 2. The rest this rate of the person named in section 2. The rest this rate of the processes of the compareignative processes of the person named in section 2. The rest this rate of the this conference on the person named the conference named the conference named the conference named the conference named the person named the conference named the person named the conference named the person | control that There knows the person named in sector 2, or in the case of a child, the ideal falling in section 9 powers their reasing the Control of the Con |
| I IM PORTANT To model connectionary delays, prisons of next uses a label or starup on the form. | Pousoie Desgree proof syntee Current DK or Sort prosport number Desgree proof syntee |
| | Spir in the brousing black het. Insportant - Leave willfall the bendar, In you half to do this, the application will auf De youts. |
| | By constersigning this application, you agree to us checking purapose coordinates to continue your constrainment of the continue your constrainment. |

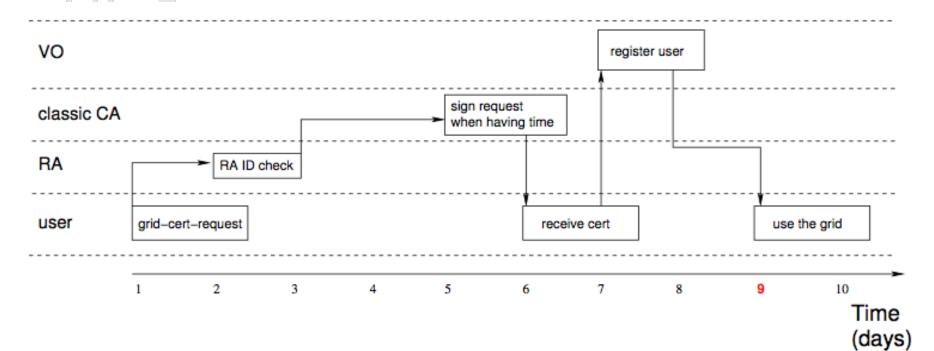

and it takes too long...

Problem II

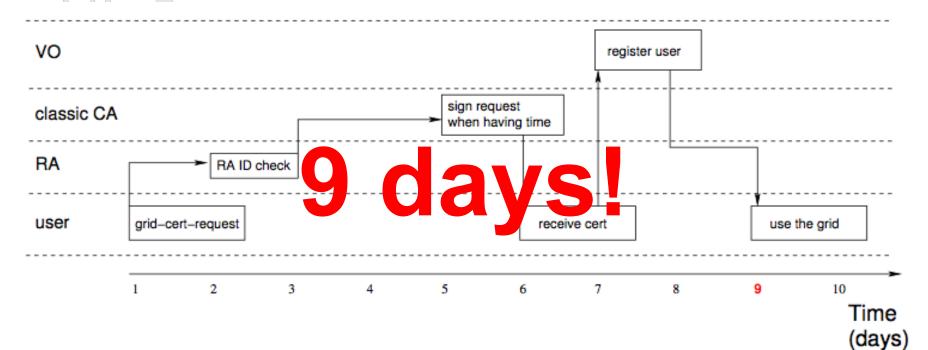

It is more complicated to Administer, Authenticate, and Authorize users than to login in to your home institution / cluster.

Problem II

It is more complicated to Administer, Authenticate, and Authorize users than to login in to your home institution / cluster.

Access

Access patterns

Access patterns

Resources in different infrastructures:

- DEISA: ~10 sites, ~100k CPUs
 - shared machines, access is mainly through login (ssh)
- EGEE: ~300 sites, ~70k CPUs
 - mainly dedicated machines, about half of the access is through grid (based on GStat)
- NDGF / NorduGrid: ~70 sites, ~40k CPUs
 - shared machines, 10-15% of access is through grid, rest is local login accounts (ssh)
- (TeraGrid: Shared machines, 10% access through grid)
- Let's build infrastructure for all the users...

Problem III

- The perceived infrastructure depends today too much on the access pattern
 - SSH
 - Portal
 - Grid
 - Cloud
 - Indirect Services
- We need to solve **Problem I** and **II** independently of the users **access pattern**

Problems

- I accounting
- II easy user authentication and authorization
- III enable it for all access patterns transparent to the user.

Solutions

- Accounting:
 - SGAS and FSGrid
- Authentication:
 - IdP
 - The TERENA Grid CA Pilot Service:
 - A Personal Certificate Service (MICS) based on National Identity Federations
- Authorization (also as prioritization):
 - □ IdP, SAML2, and VOMS, SGAS
- All access pattern... GSISSH, PAM-modules

Solutions

- Accounting:
 - SGAS and FSGrid
- Authentication:
 - IdP
 - The TERENA Grid CA Pilot Service:
 - A Personal Certificate Service (MICS) based on National Identity Federations
- Authorization (also as prioritization):
 - □ IdP, SAML2, and VOMS, SGAS
- All access pattern... GSISSH, PAM-modules

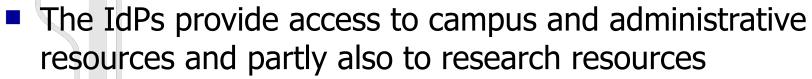

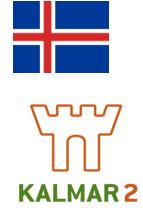

Identity Providers

- Users are already registered at their home institutions
- This identity vetting can be reused by services
 - (Shibboleth, SAML2...)
- In the Nordics we have national federations:
 - WAYF.DK in Denmark (and Iceland)
 - HAKA in Finland

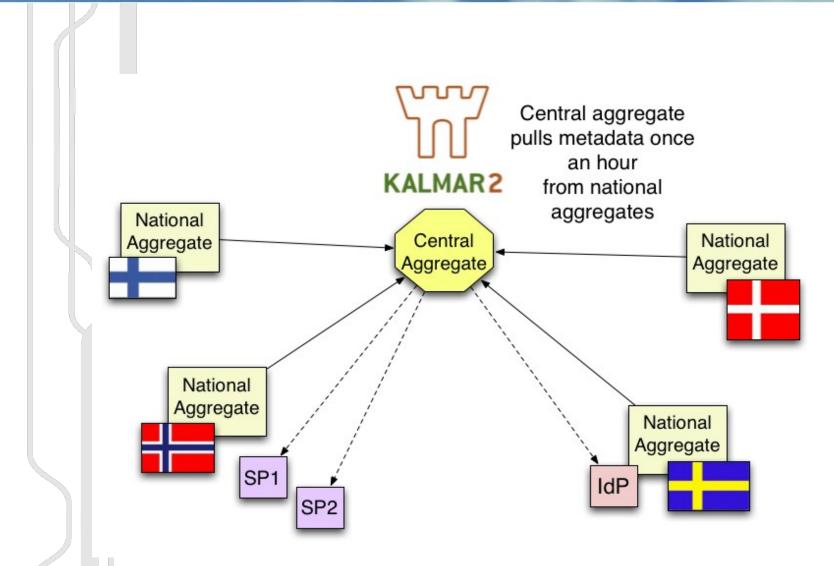

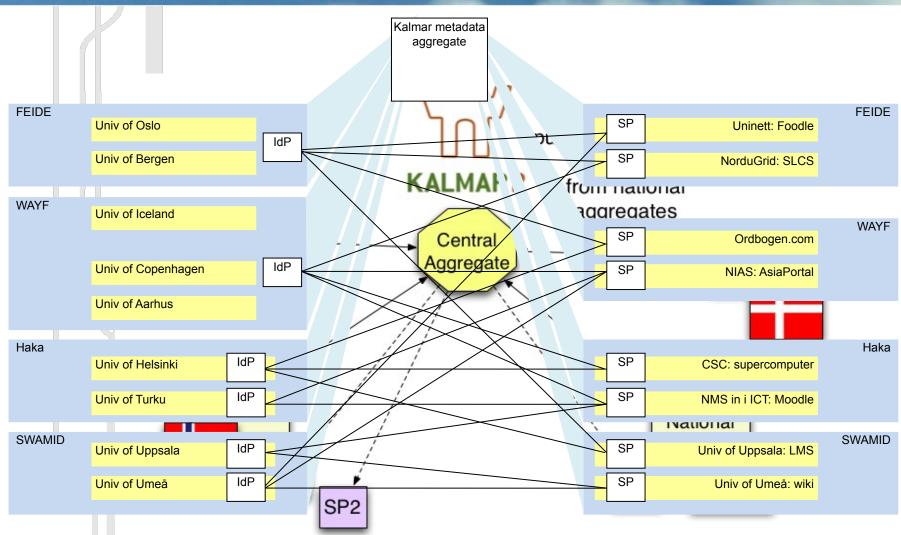

Meta-data aggregation

Meta-data aggregation

TERENA Grid CA Pilot Service

- Initiated by UNINETT in Norway and became the Nether-Nordic Short Lived Certificate Service
- Now TERENA is the organizational platform
- Ties Fed-Ids to Grid-Ids

MICs: Personal Certificates

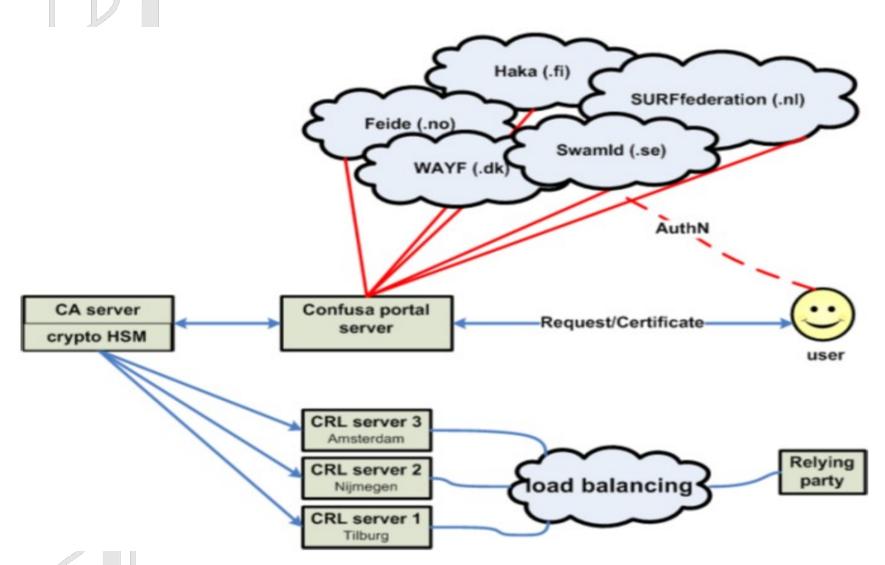

- Based on same root CA (COMODO) which means:
 - To become part of IGTF (can be used for Grid)
 - Part of Web of Trust

End of Pop-Up-Windows when using Grid!

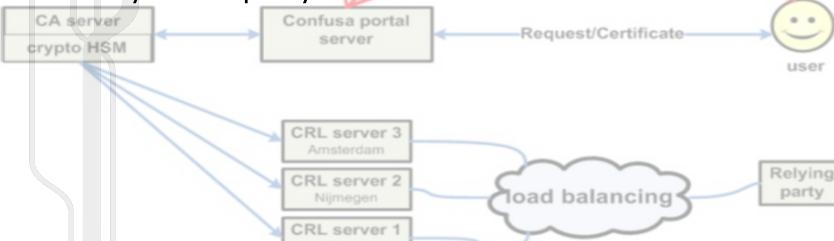

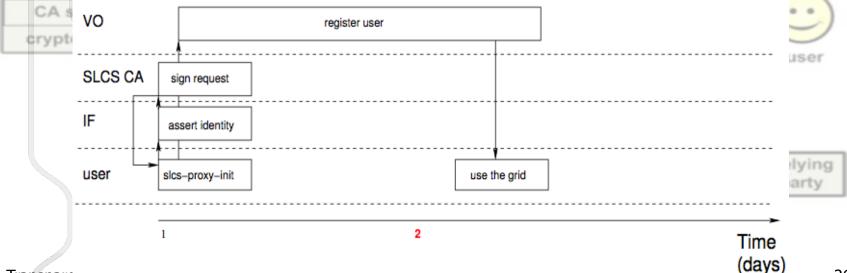

SURFfederation (.nl)

- Open Source Project based at UNINETT
- Contributions from UNINETT and NDGF
- Enables web as well as command line use
- Improves the procedure:
 - Once: grid-cert-req, vetting, voms-role-req
 - Many: voms-proxy-init

- Open Source Project based at UNINETT
- Contributions from UNINETT and NDGF SURFrederation (.nl)
- Enables web as well as command line use
- Improves the procedure:
 - Once: grid cert-req, waterng, voms-role-req
 - Many: voms-proxy-init

- Open Source Project based at UNINETT
- Contributions from UNINETT and NDGF SURFEDERALION (INI)
- Enables web as well as command line use
- Improves the procedure:
 - Once: grice cert-req, westerng, voms-role-req
 - Many: voms-proxy-init

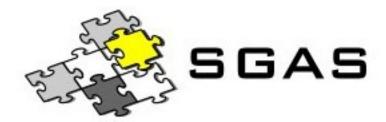

Accounting and Priorities

- We want to account to be able to control users priorities!
- This means that there is a loop between accounting and authorization
- And authorization, when it is variable, it is priority:
 - Less or More access to the resource
- Two kind of priority:
 - On / Off (quota or economy based)
 - □ Variable (ecological use what is available)

Accounting Solutions

- In the Nordics the SGAS accounting system has been deployed
- SGAS v3 being deployed now supports
 - Account grid usage
 - Account pr DN and VO
 - Supports multiple databases to enable VO, site, and Country accounting

Accounting Solutions

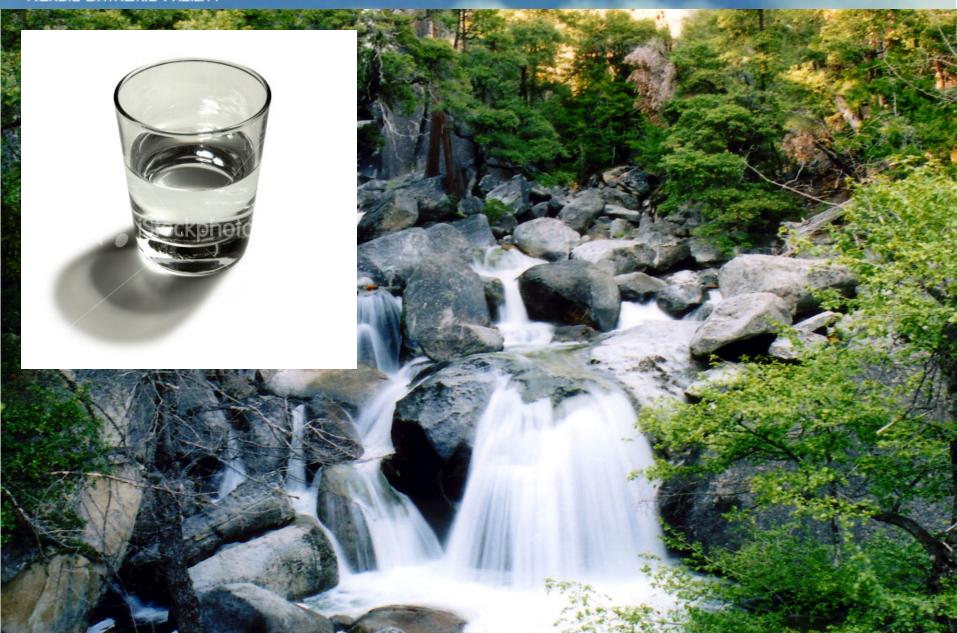

- The DEISA accounting system works with:
 - UNICORE
 - Several LRMSes...
- It stores and presents OGF-UR!
- Enables accounting of other access patterns

Capacity vs Quantity

Capacity vs Quantity

- Network is a capacity resource
- Storage is a quantity resource
 - But temporary storage (cache) is a capacity resource!
- Computing is capacity
 - But fixed allocations is a quantity resource!
- Economy works for Quantity resources
- Priority (like "fair share") works for Capacity resources

Works with

- Hard quotas
- Max number of jobs allowed to run for user, groups, roles
- Fair share scheduling
 - Better utilization then hard quotas
 - Handles different use cases
 - Grid wide job priorities
- Support site policies
- Being implemented in SGAS
- Named FSGrid and coordinated with SNIC grant user 1

Nordic Res. Sharing Framework

Problem I, II are solved and ready for deployment:

- SGAS/DEISA accounting (and FSGrid priorities)
- Federated IdPs, Confusa and TERENA Cert Service for prob. II
- Problem III:
 - DEISA accounting reporting modules
 - PAM modules being looked into.

Next Steps

- Resource Trading
 - Web tools for user priority ranking and policy settings
 - MoU between Nordic NGIs on the resource sharing / trading
- Promote an easy to administer resource usage loop:
 - Basic/new user basic (low) priority
 - Apply for more resources based on use higher priority
 - No/little use lower priority
 - Similar to single resource use optimization but infrastructure wide
- Possibility of using cross site / cross country usage in new resource funding considerations – exact policy to be determined
