

Authentication and Authorisation Policies

Diego R. Lopez

AA Convergence

- Well-established component technologies
 - Bridges among them have to be established
- Promising collaboration initiatives
- Growth strategies must be established
 - Short term: actual interoperation among *close* infrastructures
 - Mid term: support for the collaboration forums and for (funded) integration experiments
- The establishment of an specific area on security incident handling should be considered

Strategies for convergence

- Early results already available
- Incorporate campus/company infrastructures
 - Harmonization from the very roots
- Align identity management procedures and attributes
- Consider privacy and liability aspects
 - Supporting pseudo- or anonymity
- Metadata models
- Diagnostics
 - A general issue for interoperation
