

If not now, when?

# e-Infrastructures coordination

Natalia Manola  
OpenAIRE, CEO

# e-Infrastructure Forum: **A must**

- Synchronised **service delivery**: complementarity, bundles, KPIs / metrics, business models, helpdesk, etc.
- Joint **training for Open Science** areas to cover the whole research life-cycle
- **Coherent message** and common approach both for institutions (RPOs, RFOs, initiatives) and researchers. For both **services & training** serving all science & all actors
- Common development of the **next e-Infrastructure generation**: shared roadmap, scouting opportunities for innovation
- Collaboration via **existing national nodes** to build national infrastructure on open science, including skills. Fully **embedded** in Europe's
- **Joint sustainability** efforts

# eInfrastructure Forum: **How**

- **Understand each other:** operations & members; boundaries & overlaps; strengths & weaknesses
  - Already progress via EOSC Future & 07 projects
- **Understand the community**
  - Who is our community: many actors
  - What are the common messages to reach to them
- **Work towards end-to-end solutions**
  - Use of common services, e.g., AAI, Helpdesk, connect repositories and services, training
  - Adapt services to complement each other
  - EOSC Core has been a good starting point
